### Abstract:

In India, rural-urban migration has been found to be diffident in the context of urban poverty, urban slums, and informal sector employment countless deal has been talked about in reference to rural-urban population flexibility. In modern India, estimates based on industry sectors mainly employing migrants suggest that there are about 100 million circular migrants in India. Migration can be well-defined as the movement of individuals or groups of people from one place to another place who have the intention of residing in the new place for a significant period of time. Migration is the third element of population change; the other two are fertility and mortality. The nature of migration as an element of population change is different from fertility and mortality. Total Migrant people were 1790219 in Aurangabad district 703630 male migrants and 1086589 female migrants in Aurangabad district till 2011. Caste, social networks, and historical precedents play a dominant role in modeling patterns of migration in India. So in the present research paper, the major objective is to analyse migration structure in Aurangabad District. Secondary data was used for this research paper. Such a type of study indicates the real situation of the population in the Aurangabad district and helps research scholars, population scientists, and planners.

**Keywords:** Marriage migration, Education migration, Employment migration.

**Objective:** To study migration in Aurangabad District.

### Introduction:

Human migration means the people's movement from one region to another region with the key intention of settling, permanently or temporarily in a new region or place. (Gyanaranjan Sahoo, 2022)The migration movement is frequently

over long distances and from one nation to another nation. Internal migration is the leading people may travel from their native place individually, in family units, or in groups. Migration is one of the basic factors affecting on population change of an area, the other two aspects being fertility and mortality. Conceptually migration can be well-

defined as the movement of individuals or groups of people from one place to another place who have the intention of residing in the new place for a significant period of time. Migration is a very complex process. Migration study has a significant place in demographics.

#### **Study Area:**

Aurangabad is an important district in Maharashtra State is located in the central part of the Maharashtra state and it lies between 19° 18' North to 20° 40' North Latitudes and 74° 40' East to 76° 40' East Longitudes. The total Geographical area of the district is 10,137.61 sq. km and it is 3.28% of the state of Maharashtra. Among the total area, 309.35 sq. km is urban, and 9828.26 sq. km is rural area. According to the 2011 census 3701282 total population, 1924469 males and 1776813 females in Aurangabad District. Aurangabad district included nine tehsils, like Aurangabad, Khuldabad, Soygaon, Sillod, Kannad, Gangapur, Vaijapur Paithan, and Phulambri. The town of Aurangabad has been the capital town. Aurangabad town also has experienced a high rate of in-migration from rural areas to urban.

#### **Methodology:**

The present study generally depends on the secondary data. Collected through the District

Statistical Department of Aurangabad district, Census handbook of Aurangabad District, and socio-economic abstract of the District. The collected data are analyzed by cartographic and statistical techniques.

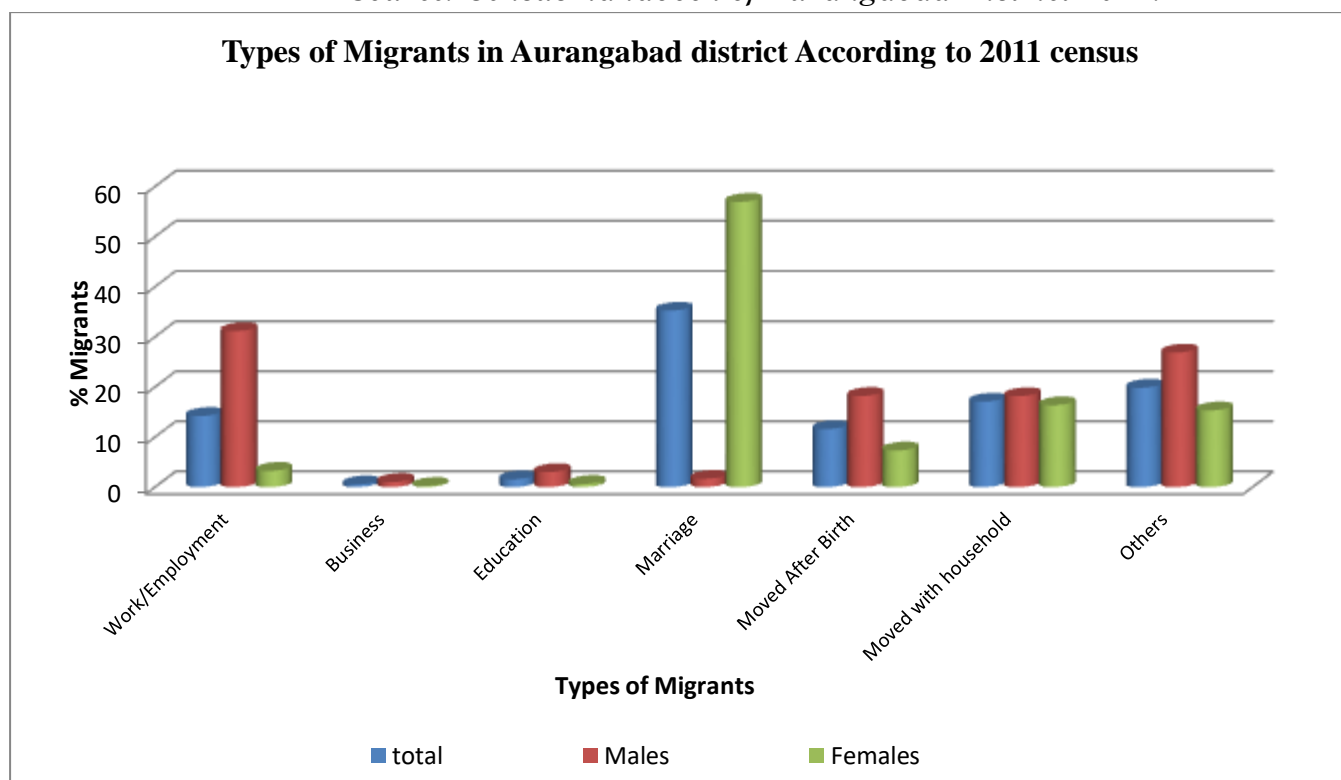

#### **Types of migration in Aurangabad district:**

The term Types of migration is regularly used in studies of migration and it includes all kinds of regional movements both permanent and temporary. Without analyzing the Types of migration and the interplay of economic, demographic, and social factors, the phenomena of migration cannot be understood. In Aurangabad district main Classifications of migration are Employment, Business, Education, Marriage, moved after birth, and moved with household. Migration is a route that carries about main structural change and in some cases rigorous displacement in the economics of both developed and developing countries. Migration study verifies its scope for investigation of families shift from one region to another region, as well as study entire population movements across national and within nation boundaries. Man's mobility has erratically increased with economic and technical progress.
