Abstract

Now-a-days the internet and computer are very useful in every field. In the research area also uses the internet and computer. The researcher uses the computer and internet in the research. The objectives of the study is to find out the problems in using internet in research by research scholars, to find out the problems in using computer in research by research scholars. The type of the research is the present researches quantitative research, the present research is descriptive in which the researcher use survey method the survey method used for two identify the problems which faced by research in using internet and computer usages. For the present study sample will be select as per Probability and also non probability methods the researcher will be selected Kolhapur district by the purposive and research scholar selected incidental sampling method. Questionnaire have used for the data collection. The present research data have quantitative. The researcher have used a percentage for data analysis.

Key words : Research Scholars, Internet Based Research, Computer.

Introduction-

The rise of the internet has not only open the door to developing research techniques such as surveys experiments interviews but also able to researchers to use literature search and retrieval techniques to locate and return materials from the web at an exponential rate in terms of size and rapidity we are some information about using internet for research experiments and interviews and locating research materials. Using the internet for the conduct of service is becoming common place in many branches of Social Science internet baseless the surveys have mode through the form of emails to emails plus attachments of the question year itself. While email have the attraction of immediacy the potential for web based service to include traffic has been to great for many researchers to resist. emails direct potential participants to website at which the survey questionnaire is located in HTML form all the email service to attract greater response than web based service have the potential to reach greater number of participants sources are advisable emails can be used as an addition to contact participant to advise them to go to a particular website. A computer as the name indicates, is nothing but a device that computers. In this sense, any device, however crude or sophisticated, that enables one to carry

out mathematical manipulations becomes A computer. But what has made this term conspicuous today and, what we normally imply when we speaker of computers, are electronically operating machines which are used to carry out computations. In brief, computer is a machine capable of receiving, scoring, manipulating and yielding information such as numbers, words, pictures.

Definitions of the Terms Study

For the purpose of the research study means a research investigation

Problems

For the purpose of the research the term a problem means difficulties in using internet and computer in research

Research Scholars

For the purpose of the study the research Scholars means who are doing the research in Social Sciences

Internet Based Research

For purpose of the research internet based research means internet based survey or web based survey

Computer

For the purpose of the research computer uses means who uses computer for research

Objectives

1. To find out the problems in using internet in

research by research scholars

2. To find out the problems in using computer in research by research scholars

Assumptions of the Study

1. The researcher uses the internet for the survey experimental reviews for the research work
2. The researcher uses computer for research work

Scope of the Study

1. The conclusion of the research is applicable to all research Scholars who are doing their research in Social Sciences
2. The conclusion of the research is applicable to research college who are using computer and internet
3. The conclusion of the research is applicable to research Scholars who are using online survey research work

Delimitations

1. The present research is delimited to the Kolhapur district
2. The present research is delimited to the only Social Science Research scholars
3. The present study is delimited to the year 2022-23

Plan and Procedure of the study Type of The Research

The present researches quantitative research

Research Methodology

The present research is descriptive in which the researcher use survey method the survey method used for two identify the problems which faced by research in using internet and computer usages.

Sample Design

For the present study sample is selected as per Probability and also non probability methods the researcher selected Kolhapur district by the purposive and research scholar selected incidental sampling method.

Tools for Data Collection

Questionnaire and also secondary data have used for the data collection.

Type of Data Obtained

The present research data have quantitative

Analysis of data

The researcher have used a percentage for data analysis

Conclusion of the Research

Some sub sample Groups are under represented in the respondents. There is coverage error. Respondents wish to keep their identity from the researcher and an email address identifies the respondents. The configuration of the questionnaire is vary from one machine to another and can lead to dropout. The screen as set out by the survey designer is not appear the same as that which appears on the respondent's screen. Slow network connections or limited bandwidth can slow down loading. Respondents have not the same software or the same version of the software as the sender rendering downloading of the questionnaire either in possible or dissolving the received the graphics. Hardware is differ between sender and receiver. There is slow loading times due to internet connection. Respondents are unfamiliar on unexpressed with the internet and the media. Respondents are sending multiple copies of their completed questionnaire from the same or different addresses. There are more than one respondent to a single questionnaire.

Respondents' difficulty in navigating the pages of the online survey. Layout becomes a matter of concern. Respondents overloaded with instructions at the beginning of the survey. Respondents have to take multiple actions in order to answer of the survey. Respondents not able to see all the option choices without scrolling down the screen. Respondents not understand instruction. The options is not clear to respondents. Respondents not be telling the truth they may represents themselves. Respondents lose Internet after a while and abundant survey there by losing all the survey data. Respondents not know how long the questionnaire is and so may lose internet. Internet service take longer to complete them paper based service
